

Graphite spray

Description

Graphite spray for applying a coating based on graphite on covers and plastic materials. Thanks to this coating disturbances of electromagnetic fields can be avoided. It also suitable against the build up of electrostatic charge. The coating reduces friction and wear in a wide temperature range. Also suitable for use in plastics, seals and gaskets to improve the sliding qualities. After evaporation of the solvent the coating is an extremely stable film, which is high resistant against water, petrol, oil, sea water, acids and vapours as well as against most alkali. Mainly used in securing of TV picture tubes, wood and plastic covers and spraying of cables.

Nonstick effect

Extremely high pressure resistant

Temperature resistant

Extra information

Item number	21121022		
Model	JT-1205		
Model group	JT ...		
EAN	8718242036962		
CBS Statistics number	84671110		
Article group	TCE Machines, Lubricants & Accessories		
Brand	TCE		
Features	Max. temp.	1200 °C	
	Volume	500 ml	
Article group code	1600853
