

Bolt remover set

Description

One of the biggest frustrations in manufacturing and repair is the seizing or breaking of bolts. When exposed to stress or harsh conditions that cause damage or deterioration, bolts can often be sheared, rusted or seized and will need to be removed and replaced. It can be challenging to remove the bolt without damaging the threads and having to re-tap the hole.

The TCE Bolt Remover Kits have been designed to efficiently extract bolts without damaging the threads or the component, ensuring a safe, clean removal.

FEATURES & BENEFITS

- Centring carbide bur system, which maximises the potential of drilling threads on centre
- Efficient extraction of broken bolt thread, avoiding damage to existing threaded holes
- CNC machined for consistently high quality and performance

Extra information

Item number	16141004
Model	BRK M12
EAN	8718242565011
Article group	Carbide rotary burr
Brand	TCE
Features	Size M12, 7/16-14, 7/16-20
Article group code	1992606
