

Welding arms with electrodes

Description

Set of arms with electrodes for Telwin spot welding machines type Modular 20/TI, Digital Modular 230, Digital Modular 400

The welding arms (also called conductors or electrode holders) are made of a good conductive material, so that a good electrical connection is obtained between the welding device and the electrode holders with the electrodes.

The position of the electrode holders determine the shapes of the product you can spot weld. In practice, you choose a version where you weld with the shortest possible electrode projection. That way, you keep the window area as small as possible and limit wear on the electrode.

Extra information

Item number	T803155
Model	XA4
EAN	8004897425818
CBS Statistics number	84623999
Article group	Products still to be classified
Brand	TELWIN
Features	Shape Straight arms + clamping electrodes
	Length 120 mm
Article group code	1205858
